Professional Summary

Full Stack Developer with over 4 years of professional experience building scalable software systems and interactive applications. Strong technical foundation in object-oriented programming, the .NET ecosystem, relational databases, and modern web technologies. Experienced across the entire software development lifecycle, from architecture design to implementation, testing, and optimization. Proactive and analytical, with strong problem-solving skills, a continuous learning mindset, and experience collaborating in multidisciplinary teams under agile methodologies.

Work Experience

Software Engineer

ZAP Arquitectos – R&D Department

July 2026 – Present

- Designed, built, and maintained Revit add-ins using C#, .NET, and the Revit API, automating repetitive tasks in architects' daily workflows.
- Translated the firm's operational needs into software solutions, working closely with the R&D team.
- Implemented QA/QC tools to assess BIM model health, detecting bad practices and proposing fixes and improvements.
- Developed .NET software to automate quantity takeoffs and model breakdowns, reducing manual work across projects.
- Contributed to the development of the company's internal ERP, integrating processes across the Sales, Operations, and R&D areas.
- Started designing the firm's centralized SQL database, aimed at the extraction, integration, and traceability of BIM data and historical project information.
- Researched and implemented AI (LLM) integrations through agents orchestrated with n8n to support the Board and the firm's architects.
- Maintained and improved AI agents previously developed by external vendors.

Software Engineer

Freelance / Self-employed

January 2026 – June 2026

- Designed and developed full-stack web applications using C#, .NET, TypeScript, React, and Next.js.
- Built and deployed an appointment booking platform with scheduling logic, authentication, and real-world business rules.
- Developed RESTful APIs with ASP.NET Core, implementing JWT authentication, modular architecture, and PostgreSQL integration.
- Designed scalable backend systems based on microservices and clean architecture, prioritizing maintainability and scalability.
- Modeled relational databases and optimized queries to improve application performance and efficiency.
- Implemented deployments and infrastructure on AWS using EC2 and S3, managing environments and production readiness.

C# Developer / Software Engineer

Crombie.dev

October 2025 – December 2025

- Designed and implemented modular software architectures applying SOLID principles and engineering best practices.
- Developed systems using C# and .NET, focused on maintainable and scalable application logic.
- Integrated server-side systems through REST APIs, WebSockets, and MQTT, enabling real-time communication between devices.
- Implemented data synchronization systems between mobile devices and VR environments via Bluetooth and Wi-Fi connectivity.
- Collaborated with backend and mobile teams to define data flows and scalable system architecture.
- Optimized performance through iterative analysis and metric validation (memory usage, rendering, and FPS stability).
- Took part in debugging, refactoring, and improving the maintainability of complex codebases.
- Worked under agile methodologies (Scrum) alongside multidisciplinary teams.

C# Developer

SISMO Games

August 2023 – October 2025

- Contributed to the development of a cross-platform Unity application, involved in the full development cycle from feature design to optimization. Developed object logic systems and mechanics in C#, applying clean code principles and modular design.
- Implemented reusable components and event-driven systems to improve project scalability.
- Integrated third-party SDKs and analytics tools. Developed and improved user interfaces with a focus on usability and performance.
- Performed debugging, testing, and bug fixing through iterative validation.
- Collaborated with multidisciplinary teams (design, art, QA, production) under the Scrum methodology.

Fullstack Developer

Digital Entertainment Lab – UNRaf Tec

September 2021 – August 2023

- Developed a physiotherapy telerehabilitation web application for a private telemedicine company, built with React, Next.js, Node.js, and PostgreSQL.
- Contributed to technical architecture design and data modeling.
- Implemented business logic and optimized database queries.
- Worked with REST APIs, JSON structures, JWT authentication, and relational databases.

Education

Bachelor's Degree in Video Game Production and Digital Entertainment – Universidad Nacional de Rafaela (2024)

Technical Degree in Video Game Development and Interactive Narratives – Universidad Nacional de Rafaela (2021)

Skills

Technical

- C#, .NET / .NET Core
- SOLID principles and modular architecture.
- JavaScript, React, Next.js, HTML, CSS.
- Node.js, REST APIs, WebSockets, MQTT, JWT Auth. JSON and data structures.
- SQL databases (PostgreSQL, MySQL).

Generative AI, Coding Agents & Context Engineering

- Configuration of coding agents (Claude Code, Codex, OpenCode) using Skills, AGENTS.md, and MCP servers.
- Context engineering with structured Markdown files and persistent memory across sessions.
- Spec-Driven Development (SDD) and TDD, with review and verification of generated code.
- Organization of technical knowledge in reusable, LLM-compatible formats.

Development Tools & Practices

- Git
- GitHub
- Bitbucket
- Docker
- Jira
- Trello

Methodologies & Teamwork

- Scrum and Kanban
- Iterative testing and continuous improvement
- Translating business requirements into technical solutions
- Interdisciplinary work in agile environments

Languages

English – Upper-Intermediate (Cambridge B2)

Spanish – Native

Certifications

- Code in Place – Stanford University (2026)
- Google AI Essentials – Google/Coursera (2025)
- MongoDB Data Modeling – MongoDB (2022)
- Codo a Codo 4.0 – Front End Java – Agencia de Habilidades para el Futuro (2024)
- Web Programming with JavaScript – UTN FRRe (2021)
